We are asking you to be in a science study. Today, we will be taking a piece of your skin for testing. The piece of skin will be really small. We are doing the skin test to see if you have a health problem with your joints or your bones.

After we are done with the test we would like to save any leftover skin to use in a science study. We'll take the extra skin and put it in a freezer so that it can be saved for a long time. Later, we will thaw it out and do a science study. Can we keep the leftover skin to study later?

You do not have to take part in this study if you don't want to. No one will be mad at you.
